

EKLOBAC[®]

Prebiotic with auxinic action

EKLOBAC®

Biostimulant based on Alginic Acid from liquid extract of Ecklonia Máxima algae and microbial fermentation with the bacteria Pseudomonas spp.

Eklobac is a liquid biosolution especially designed to take care of the soil microbiota, increasing the population of microbes. This formulated based on organic acids and acid alginic obtained by fermentation of rhizobacteria.

 Microorganisms

 Prebiotic molecules

 Pathogenic microbes

BENEFICIOS

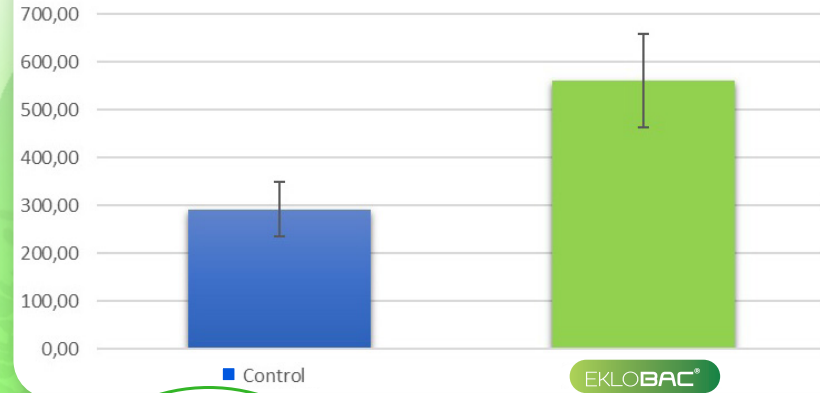

- ✓ Incorporation of secondary metabolites.
- ✓ Contains high concentrations of phytohormones natural (auxins, cytokinins, etc.), carbohydrates, proteins, amino acids, vitamins and minerals.
- ✓ Generator of stimulating biomolecules.
